

To ensure a smooth, fully hands-on experience, please make sure you have:

- A Windows, Mac, or Linux machine. The instructor will use Windows, but all the tools used in this workshop are supported on all three platforms, as well as web versions of the tools.
- Basic knowledge of electronics.

Workshop Code Repository:

All workshop resources, example packages, and setup instructions are available here:

GitHub: <https://github.com/NurveNetworksLLC/PacktRaspberryPi2Pico>

Google Drive Backup:

<https://drive.google.com/drive/folders/1tHosZPVCeLUzPfbYesz87nlo7up899XD?usp=sharing>

Finally, here's a link to the actual Raspberry Pi Pico 2 project on easyEDA servers that each student will want to clone/copy/fork, so they have a local copy to work with:

https://easyeda.com/editor#project_id=84d0632827074ba681ef0c3c9c32c400

Datasheets

- [Primary Raspberry Pi Site](#)
- [Hardware Design Guide for RP2350](#) (recommended to review)
- [Datasheet for RP2350](#) (reference, peruse)
- [Raspberry Pi Pico 2 Datasheet](#) - (recommended to review)

Apps to Pre-install

- [EasyEDA Standard Desktop Version](#) (free) - <https://easyeda.com/>
- [Thonny IDE for MicroPython](#) (free) - <https://thonny.org/>
- [Viewmate FREE Version Gerber Viewer](#)
